MolDiag-PaCa Consortium: “A Pancreas Cancer Research Celebration!”

Madrid, June 8th, 2009, 16 – 19:30h

We desperately need to make progress towards reducing pancreas cancer mortality. Recent advances in mouse models of the disease, the genetic factors involved in its development, and in the treatment of patients with resectable tumours are paving the way to making such progress.

Programme

Mariano Barbacid, CNIO, Spain

Modeling PDA in mice: pancreatitis, inflammation and senescence

Gloria Petersen, Mayo Clinic, USA

New developments and prospects for genetic susceptibility studies of pancreatic cancer

John Neoptolemos, Royal Liverpool University Hospital, UK

Pancreatic Cancer at the Cross Roads

David Tuveson, Cancer Research UK Cambridge Research Institute, UK

Pancreatic Cancer Medicine in Mice

Organizers

Núria Malats, CNIO, Spain

Francisco X Real, CNIO, Spain

Thomas Gress, Universität Marburg, Germany

Registration not required
